

PROTECTING AGAINST INFLUENZA IN PEOPLE

WITH Diabetes

INFLUENZA (FLU) IS A PREVALENT, CONTAGIOUS, AND VACCINE-PREVENTABLE INFECTIOUS DISEASE IN CANADA

CONSEQUENCES OF INFLUENZA INFECTION CAN BE DEVASTATING FOR INDIVIDUALS LIVING WITH DIABETES.

People with diabetes are at higher risk of serious influenza-related complications, hospitalizations or even death.¹⁻⁴ These complications include but are not limited to:^{2,5}

Bronchitis

Worsening of Chronic Heart Disease

Pneumonia

Sinus & Ear Infections

Diabetes patients frequently have other

chronic diseases, such as:

- COPD
- hypertension
- renal disease

that put them at high risk for influenza-related complications or hospitalization.^{6,7}

For hospitalized patients, acute illness is one of several obstacles to maintaining blood sugar control.⁸

have 2 or more other chronic diseases and

have 3 or more other chronic diseases⁶

In Canada, the number of type 1 & 2 diagnosed diabetes cases is expected to increase by approximately 30% by 2030.^{9,10}

Diabetes can reduce lifespan by

5-15 years.¹⁰

DC* and NACI** RECOMMEND

influenza immunization for individuals with diabetes, and NACI recommends the same for their close contacts:^{1,11}

BENEFITS OF SEASONAL INFLUENZA VACCINES¹

- ✓ Considered the most effective method to prevent influenza
- ✓ Helps protect those who are vulnerable to serious illness

GET YOUR INFLUENZA VACCINE TODAY!

Influenza season usually peaks in the winter months, but can occur as early as fall and as late as spring. Early immunization is preferred, but it is not too late to get the influenza vaccine in January or beyond.¹

VACCINATION IS THE MOST EFFECTIVE WAY TO PROTECT YOURSELF AGAINST INFLUENZA.¹

For more information on seasonal influenza vaccines, visit www.immunize.ca.

Vaccination may not protect 100% of individuals. Side effects and allergic reactions may occur. TALK TO YOUR DOCTOR ABOUT THE RISKS AND BENEFITS OF INFLUENZA VACCINATION.
